[Part 11 - Bootstrap blockquotes and lists](#)

Bootstrap list groups are useful for displaying simple lists of elements, as well as complex ones with custom content.

Basic list group : To create a basic list group, create an unordered list. Use `.list-group` class on the `` element and `list-group-item` class on the `` element.

```
<ul class="list-group">
  <li class="list-group-item">India</li>
  <li class="list-group-item">USA</li>
  <li class="list-group-item">UK</li>
</ul>
```

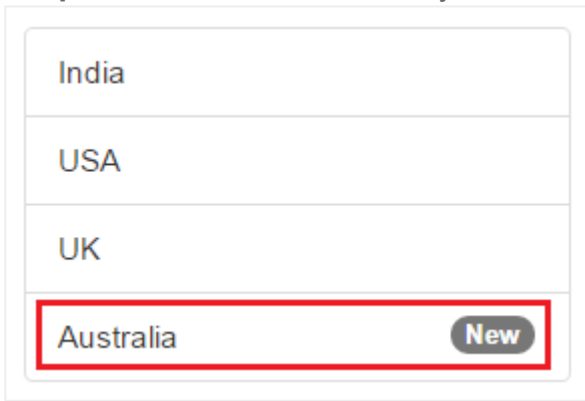

Output :

List group item with a badge : To create a badge, include a `` element with `.badge` class inside the `` element.

```
<ul class="list-group">
  <li class="list-group-item">India</li>
  <li class="list-group-item">USA</li>
  <li class="list-group-item">UK</li>
  <li class="list-group-item">
    Australia
    <span class="badge">New</span>
  </li>
```

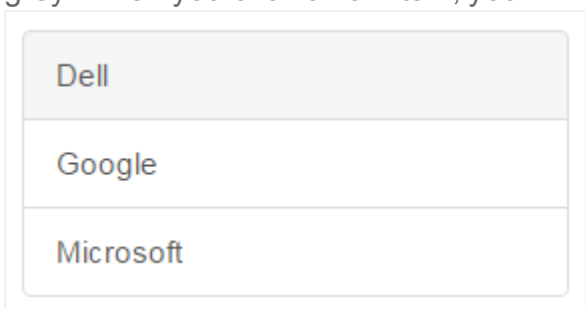

Output : Notice the new country **"Australia"** is displayed with the badge **"New"**

List group with hyperlinks : To create list group with hyperlinks, use <div> instead of and <a> instead of

```
<div class="list-group">
  <a href="http://dell.com" class="list-group-item">Dell</a>
  <a href="http://google.com" class="list-group-item">Google</a>
  <a href="http://microsoft.com" class="list-group-item">Microsoft</a>
</div>
```

Output : On hover the cursor changes to a hand symbol and the background colour changes to grey. When you click on an item, you will be redirected to the respective URL.

Styling list items : Use contextual classes to style the list items. The following are the contextual classes

Contextual Classes
.list-group-item-danger
.list-group-item-info
.list-group-item-success
.list-group-item-warning

```
<ul class="list-group">
  <li class="list-group-item list-group-item-danger">India</li>
  <li class="list-group-item list-group-item-info">USA</li>
  <li class="list-group-item list-group-item-success">UK</li>
  <li class="list-group-item list-group-item-warning">Australia</li>
</ul>
```

Highlight and disable list group items : Use `.active` class to highlight a list-group-item and `.disabled` class to disable a list item.

```
<ul class="list-group">
  <li class="list-group-item disabled">Disabled Item</li>
  <li class="list-group-item active">Active Item</li>
  <li class="list-group-item">Other Item 1</li>
  <li class="list-group-item">Other Item 2</li>
</ul>
```

Output :

List group custom content : List groups can contain your own custom content. Nearly any HTML can be used. We will use the following 3 classes to create list group with custom content.

List Group Custom Content
.list-group-item
.list-group-item-heading
.list-group-item-text

```
<div class="list-group">
  <a href="#" class="list-group-item">
    <h4 class="list-group-item-heading">List Group Item 1 Heading</h4>
    <p class="list-group-item-text">List Group Item 1 Text</p>
  </a>
  <a href="#" class="list-group-item">
    <h4 class="list-group-item-heading">List Group Item 2 Heading</h4>
    <p class="list-group-item-text">List Group Item 2 Text</p>
</div>
```

```
</a>
<a href="#" class="list-group-item">
  <h4 class="list-group-item-heading">List Group Item 3 Heading</h4>
  <p class="list-group-item-text">List Group Item 3 Text</p>
</a>
</div>
```

List Group Item 1 Heading List Group Item 1 Text
List Group Item 2 Heading List Group Item 2 Text
List Group Item 3 Heading List Group Item 3 Text
